Abstract. *In this article, the development of industrial production enterprises is stable in the country's economy opinions about its development and importance in the development of society are stated. Industrial enterprises in our country and their production activities were analyzed. Also, prospects for the development of industrial enterprises relevant proposals have been made.*

Key words: *industry, enterprise, industrial production, industrial indicators, industrial structure, industrial products, consumer goods.*

Абстрактный. *В данной статье развитие предприятий промышленного производства является стабильным в экономике страны. изложены мнения о его развитии и значении в развитии общества. Промышленные предприятия нашей страны и была проанализирована их производственная деятельность. Также перспективы развития промышленных предприятий были сделаны соответствующие предложения.*

Ключевые слова: *промышленность, предприятие, промышленное производство, отраслевые показатели, структура промышленности, промышленная продукция, товары народного потребления.*

Annotatsiya. *Ushbu maqolada sanoat ishlab chiqarishi korxonalari rivojlanishining mamlakat iqtisodiyotining barqarorrivojlanishi va jamiyat taraqqiyotidagi ahamiyati to'g'risidagi fikrlar bayon etilgan. Mamlakatmizdagi sanoat korxonalariva ularning mahsulot ishlab chiqarish faoliyati tahlil qilingan. Shuningdek, sanoat korxonalarini rivojlantirish istiqbollari bo'yicha tegishli takliflar berilgan.*

INTRODUCTION

It's no secret to all of us that today any the economic potential of the state, its industrial development is evaluated by the degree to which it is developed. For this reason, all the industries in our country develop their networks increase the competitiveness of the market for it Of all the means suitable for relations, eng effective use of new experiences is creating the necessity. Our country is one of the developed countries the main direction of ensuring that it is received is gross national by increasing the share of industrial production in the product to go is to achieve. Internal and external in time to supply and demand changes in the markets produce adaptable, competitive goods have output-based industries the state will integrate into the world community faster takes The industry of our country is the national economy from the leading sectors of electricity, gas, machinery, light and heavy industry, domestic and needs of foreign markets satisfy was established and is developing. Economic reforms are underway and the market our country is adapting to its relations industries are gradually improving and mutual taking the form of a linked complex.

RESEARCH METHODOLOGY

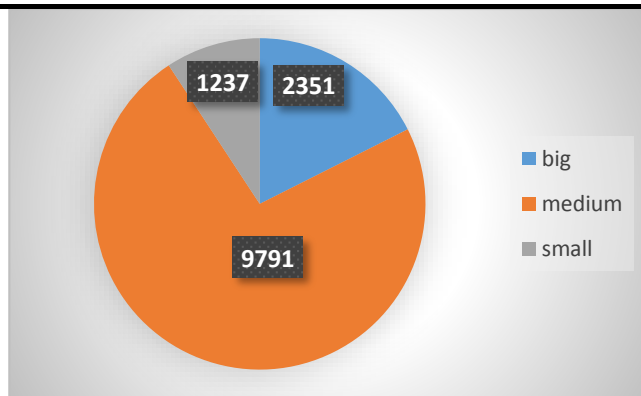

In general, manufacturing enterprises are considered to be two levels of private manufacturing and industrial manufacturing enterprises. In fact, both business groups have their own processes, although their modes of operation are essentially the same. Therefore, it has different roles from time to time in terms of enterprise resource planning. In this context, measuring, testing and analyzing industrial production is important in terms of determining whether product quality and specifications meet customer requirements. Industrial manufacturing companies focus primarily on operational efficiency. This can be achieved by following standards, legal regulations and certain production technologies and methods.

OF LITERATURE ON THE SUBJECT ANALYSIS

Decree of the President of the Republic of Uzbekistan No. PF-60 dated January 28, 2022 "On the Development Strategy of the New Uzbekistan for 2022-2026" and February 1, 2021 No. PQ-4969 "On additional measures to create a healthy competitive environment in the agricultural machinery sector", No. PQ-4410 of July 31, 2019 "Agricultural "On measures related to the rapid development of agricultural machinery, state support for the provision of agricultural machinery to the agrarian sector", PQ-7 dated November 11, 2021 "Agriculture in Chirchik" This monograph serves to a certain extent in the implementation of the tasks defined in the "Decisions on measures to organize the machine-building cluster of the economy" and other regulatory legal documents.

New Uzbekistan for 2022-2026 in the intended development strategy, the economy stable high growth rates in the sectors in the next five years by providing "... income to enter the ranks of "above average countries". defined as one of the main goals. Macroeconomic stability of our country in the strategy of further strengthening and development to achieve the set goals In Uzbekistan, the basic sectors of the economy are electricity, oil and gas, gold mining, non-ferrous metals metallurgical, chemical and petrochemical industries development is given priority. Transformation of economic sectors in the strategy gross on the basis of making and rapid development of entrepreneurship domestic product per capita in the next five years 1.6 times and per capita by 2030 income from four thousand US dollars It is planned to create a ground for increase. It should be noted that the economy the rise-active innovative in all sectors the impact of the industrial sector that has passed on the path of development It is correct to say that it happened because of.

Index of industrial enterprises in the industry of the Republic of Uzbekistan at the end of 2022

ANALYSIS AND RESULTS

Today, the effectiveness of the activities of industrial enterprises against the crisis in the world is aimed at increasing production according to the current and promising economic and technological conjuncture, improving the activities of economically disadvantaged enterprises in the most optimal way from a socio-economic and technical-technological point of view. scientific researches are carried out at a priority level. As part of the ongoing research, the development (improvement) of tools and mechanisms that ensure timely adaptation to changes in the external environment, the development (improvement) of effective mechanisms for preventing bankruptcy, taking into account the targeting of expenditures and the appropriateness of the composition of products) special importance is attached to scientific research. In recent years, the modern requirements of economic sectors, including the agricultural machinery industry, in Uzbekistan comprehensive reforms are being carried out in such directions as development and increasing competitiveness in the world market, providing production sectors with modern technologies. "...One of the most important priority tasks is to increase the share of industry in the structure of the national economy, to rapidly develop, modernize and diversify high-tech industries, to ensure comprehensive and effective use of the industrial potential of each region" is considered In this regard, it is necessary to reduce the cost of products according to the effective organization of the production process, to improve the approach of diagnosing (estimating) the economic incapacity of enterprises in the

¹ formed the author himself

conditions of scripted development based on the situational economic conditions, to make effective use of internal capabilities and production capacity. It is desirable to further deepen scientific researches in such areas as the effective use of materials, including the optimization of the production process and the improvement of the level of forecasting of production.

Industry-national defense capability material the basis is to maintain peace and stability in the country an important factor is the independence of neighboring countries, is an important area that ensures cooperation and solidarity. In guaranteeing the defense of the state of Uzbekistan the role of industry is invaluable. The role of industries in the republic's industry is different different Among the industrial sectors are the processing of agricultural products and the agro-industrial complex service industries to a historically leading position have These are cotton ginning, silk weaving, canning, oil- oil and other industries. The analysis of statistical data shows that in 2019 2022 is the age of the industrial activity of our country increase in production of all types of products has a tendency.

In recent years, the car and production, repair and installation of equipment, motor vehicles, trailers, semi-trailers and production of other finished metal products, repair with electricity, gas, steam and air air conditioning and textiles, clothing, leather the production index of products is increasing is observed to increase⁵ . Such a process, our in our opinion, the economy of the country It is correct to say that it is showing signs of industrialization will be With water in the last years of the period under study supply, sewage system, waste collection and disposal works index significantly is decreasing. Such a situation, in our opinion, branches belonging to these types of activities are obsolete and qualified due to the lack of specialists. Industrial development is one of the country's natural resources, wider and more than raw materials and labor resources creates the possibility of bilateral use. By the end of 2022, there will be 2351 6 large and medium, 97,915 small enterprises and micro-enterprises there is. Leader in metallurgy-industrial production In the considered countries, the decisive factor of the economy is a network. Metallurgy is different to prioritize

industries in the global market, in particular, they help to produce high-quality rolling stock. Today, most of the metallurgical products The best types are USA, Japan, Russia and the West It is produced in European countries. These countries manufacturers not only meet the demands of the domestic market, but also hundreds of millions abroad by exporting a roll equal to dollars are coming The need for quality rolling stock worldwide determining the increasing relevance of the field is giving.²

CONCLUSIONS AND SUGGESTIONS

Gross domestic product and gross added A significant part of the value is generated in the industrial sector is released. It is in industrial production that new equipment, devices, etc. are created through the introduction of scientific and technical achievements. And they in turn, operating in other industries material and technical base of enterprises used in strengthening. in 2019-2022 being created in industry (including construction). the amount of added value is increasing year by year. However, this network is in the country share of added value created in 2022 Compared to 2019, it decreased by 0.37 points. During this period, the share of the service sector is still high is happening This is natural. Because in Uzbekistan one of the priorities of the service economy is considered In the context of economic liberalization of the number of small industrial enterprises and micro-firms increase in the competitive environment in the technical service system requires formation. Therefore, different property service provider in the form of texservis creation of enterprises is very important. Today, a small industrial enterprise is separate establishment of a technical service center does not have the opportunity (sufficient funds). Such under the circumstances, in our opinion, several farms, (including micro firms) united without inter-enterprise maintenance (service) it is desirable to establish a center.

Improving the activities of industrial production enterprises in the conditions of the market economy Improving the activities of industrial

production enterprises is one of the urgent issues in the market economy. This process involves many aspects, including:

1. Conduct market research: Businesses need to analyze the market in which they sell their products. For this, it is necessary to study consumer requirements, competitors and market trends.

2. Introduction of innovations: New technologies and innovative solutions make it possible to offer, increase product quality and reduce costs.

3. Strengthening relations with customers: By developing international relations with customers, it is necessary to satisfy their requirements and pay attention to their feedback.

4. Quality improvement: Improving the quality of products and service will help strengthen the brand and increase consumer confidence.

5. Increasing financial efficiency: It is important to develop strategies for effective management of the company's internal resources, reducing costs and increasing profits.³
